

Black/White ACRYLITE® P-95 acrylic sheet

One Product - Two Colors; Different as Night & Day

Black/White ACRYLITE® P-95

acrylic sheet appears dark during the day and with a little backlighting, glows white at night. This unique attribute is possible due to a special pigment formulation that yields 10-19 percent light transmittance when backlit, yet appears dark and opaque without backlighting. The amount of light transmission can be adjusted by varying the percentage of pigment in the acrylic so that transmission is the same for all thicknesses.

Black/White ACRYLITE P-95 sheet performs well with LEDs, neon, fluorescent, and incandescent lighting. These features, along with its durable matte surface, make Black/White ACRYLITE P-95 sheet a bright choice for channel letters and sign faces.

Features & Benefits

- Durable matte surface
- Weatherable for outdoor applications
- Easily formed and fabricated
- Excellent diffusion properties
