

# ACRYLITE® truLED acrylic sheet

Superior Performance In Any Light

ACRYLITE® truLED acrylic sheet was specifically developed for backlighting with LEDs and provides maximum transmission and optimum light diffusion. These unique properties deliver a brilliant appearance and eliminate undesired hot spots or fluctuations in luminance, even in ultra slim illuminated signs.

The light transmission of ACRYLITE® truLED sheet is adjusted to the same wavelength ranges as the respective LEDs. This combination of properties makes it possible to employ modern LED technology with maximum brightness.

The standard range of ACRYLITE® truLED sheet comprises white LEDs with other grades corresponding to LED colors (red, green, yellow, blue) on a custom order basis. ACRYLITE® truLED sheet can also be supplied in Corporate Identity Color grade (CI). This means that in incident light (daylight), ACRYLITE® truLED sheet is comparable to a specified Corporate Identity Color. Following this principle, upon request and subject to volume requirements, CI colors can be provided or developed as necessary for your project.

## Product Specifications

- Standard Size: 80" x 120"
- Thickness: .118"
- Color: White WH72
- Further (corporate identity) colors, sizes and thicknesses, as well as satin surfaces, can be developed & manufactured on request.
